

Features:

- Fully programmable control from 2800 panel
- 16 touch pad buttons (momentary or latch on/off)
- 16 red Leds and 16 yellow Leds
- Lamp Test

Ideal For:

- Zone isolation/control
- Solenoid Test
- Isolation
- Ancillary Controls

Description:

The 2800-ACM-16AT Annunciator Module connects to the AFP-2800 RS485 communication ring and can be mounted internally or externally from the panel.

The touch pad switches may be set in banks of 8 to either "toggle on/toggle off" or momentary modes.

This module is ideal to use for zone isolation and display. Each button is assigned a zone isolate function and the red and amber led display the alarm status for that zone.

The 16AT can also be used for a variety of ancillary controls including Solenoid valve test buttons and or ancillary controls/ displays.

Slide in paper labels make custom labelling simple and neat.

Up to 99 annunciators can be installed per communications ring.

Specifications:

Operating Voltage:	18-27VDC
Current Consumption:	100mA Max
Communications:	RS485
Addresses:	1-99
